|  | Very Rare – Once Every 5-10 Years |

\*Threat levels are based on FEMA Region 6 criteria. State or local threat level criteria may differ.

# Hazardous Weather

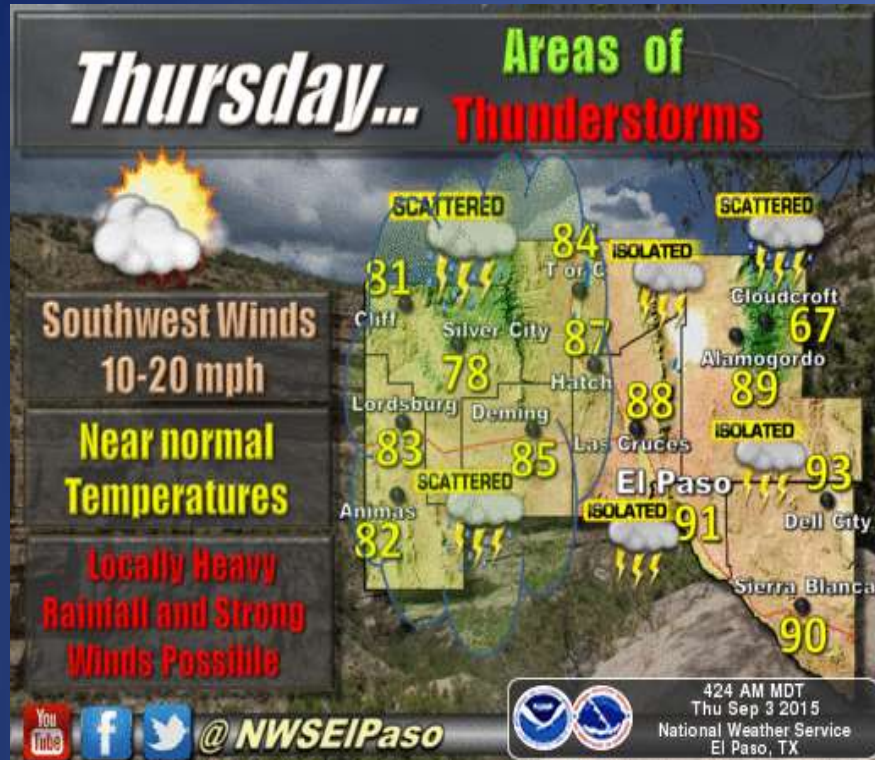

Isolated to scattered showers and thunderstorms will be possible today for areas along and east of Interstate 35. Highs will generally be in the 90s across the area, with winds remaining out of the southeast at 5 to 15 mph

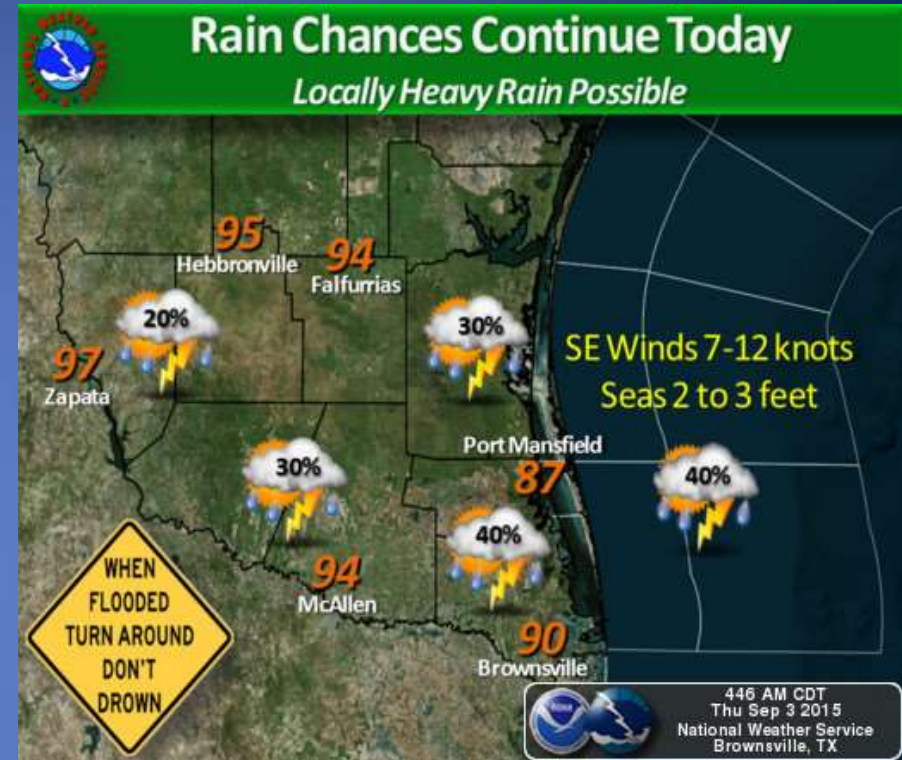

Similar conditions from yesterday are expected today. Isolated to scattered showers will develop today and diminish through the late afternoon and early evening hours under partly cloudy to mostly cloudy skies.

# Hazardous Weather

Moist unstable air will continue to flow into southern New Mexico and west Texas and this will result in areas of showers and thunderstorms...mainly during the afternoon and evening. A few storms may produce heavy rains and flooding or possible strong damaging winds...especially west of the Rio Grande. Skies will be partly to mostly sunny with highs mid 80s to mid 90s lowlands and around 70 to 80 mountains.

The rain chances continue today, with scattered showers and thunderstorms once developing across the Rio Grande Valley and Deep South Texas. Locally heavy rainfall is possible and any areas that have already received copious amounts of rainfall are especially susceptible to flooding issues. Otherwise, skies will be mostly cloudy and temperatures will be a degree or two warmer than yesterday, with highs only in the lower to mid 90s. Remember, if a roadway is flooded, turn around, don't drown!

# Hazardous Weather

Temperatures will warm above normal today, with lots of sunshine and only passing high clouds expected. A few isolated afternoon/evening thunderstorms will be possible, mainly across the higher terrain of west Texas and southeast New Mexico.

# Weather Warning/Advisories Issued

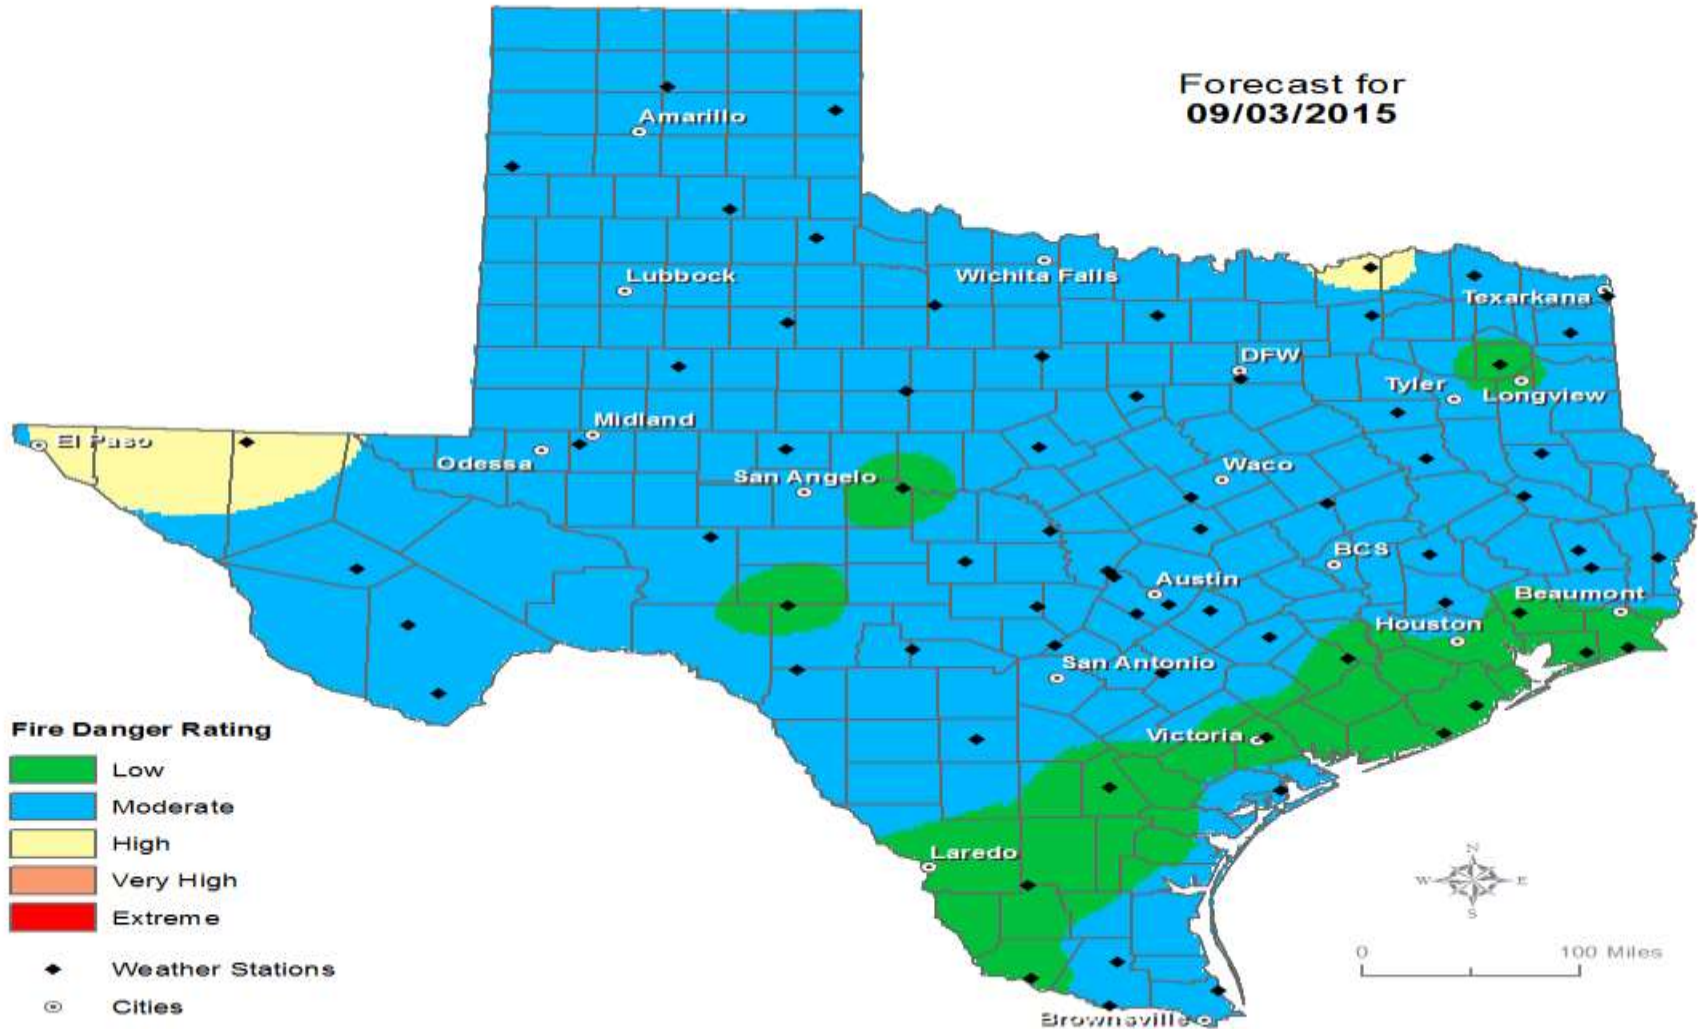

DATE	WARNING TYPE	LOCATION
09/02/15	Arroyo and Small Stream Flood Advisory	Hidalgo and Starr Counties
